ProMark[™]3 RTK

High Precision Without The High Cost

Real-time centimeter accuracy no longer means costly equipment. Thanks to Magellan's exclusive Blade[™] technology, ProMark[™]3 RTK reliably delivers the most affordable centimeter accuracy on the market.

ProMark3 RTK includes new real-time GNSS (GPS+SBAS) capabilities in addition to its existing complete post-processing features. With ProMark3 RTK, reliability, portability, accurate surveying and mapping are now possible for surveyors who need affordable high-precision GNSS capability.

Magellan innovates once again, and gives the RTK market a kick by setting a new quality and price reference for RTK solutions. ProMark3 RTK is ideally suited for short baseline surveys, and can operate in two modes; base + rover and rover only in GPS networks. It is easy to use and lets any surveyor put RTK to work to increase productivity.
